

Automated Transit Communities WE CAN DO BETTER!

INVITATION October 2, 10.30am-12 noon

Brown bag lunch. NORDIC INNOVATION HOUSE, PALO ALTO
470 Ramona St, Palo Alto, CA 94301

Is this it? Will we forever be under the spell of the Automobile and weak public transit options? Or are there ways to actually do something better?

Regardless if the car has self driving capabilities, a big battery and even using a radar detecting a squirrel on the road, it is still very much the same product. Public transit options are not that great and most people avoid them unless they can't afford a car or are unable for many other reasons.

We can do better!

Today there is 100+ billion dollars invested in self electric cars. We challenge this. It can be better used for real paradigm change in mobility.

Change is possible. By connecting research, brilliant minds, forward looking and responsible policy makers we can truly change the deeply worrisome path we are currently walking. We need better public transit and mobility. That is why we - the signatories of this initiative of Automated Transit Communities - have decided to support a framework for future mobility. We have put together a set of criterias that should be the characteristics we strive for and we encourage inventions, research and development of solutions based on this framework. Many people and organizations will meet on December 1.

Come to Nordic Innovation House October 2 in Palo Alto to hear about it.

Meeting has limited space. RSVP not later by September 29, 2023 to Christer@4Dialog.com
